

Cannabis Adverse Effects in Clinical Practice

ONLINE STUDY

Click here to participate, <https://redcap.link/uwcannabisstudy>, or use the camera on your phone to scan the QR code

What is this study about?

Purpose: Understand clinician beliefs and behaviors related cannabis adverse events to inform future clinician education and training, and to identify opportunities for implementing clinical interventions. Your participation will provide nurses' perspective to the study.

Eligibility: All nurses licensed and working in the state of Washington, who have direct contact with patients in WA State are eligible to participate in this study. Please read this information page to learn more about the project.

Emergency Nurses Play a Vital Role: According to various studies, emergency care settings are the most frequent sought services for people who experience cannabis-induced adverse effects. For this reason, we are very interested on emergency nurses' perspectives.

Feel free to ask any questions you may have before agreeing to participate in the study by emailing cerp@uw.edu.

What will you be asked to do?

If you decide to participate in this study, we will ask you to take a brief survey about your knowledge, beliefs, clinical practices, and interest in intervening on cannabis adverse events and personal and institutional barriers for addressing cannabis adverse events.

This online survey will take approximately 15 minutes to complete. You will receive a \$35 gift card by email within 5-7 business days after you complete the survey.

Please complete the survey in a private space where other people won't be able to see your answers.

How will we protect the information you provide?

We will protect your confidentiality. We will store the data with a code instead of your email address. We will keep a list that links the code to your email and will store it securely and separate from the data.

Other information about this study.

Being in this study is voluntary. This means that you can stop the survey at any time.

We are receiving funding from the Washington State Legislature through ESSB 5187 (2023) and by the Washington State Dedicated Cannabis Fund for research at the University of Washington.

The University of Washington Human Subjects Division (HSD) has determined that this study is exempt from IRB review.

How will research findings be disseminated?

The results of this research will be published in an academic journal and will be shared with the purpose of education and awareness for community stakeholders (e.g., policy makers, Healthcare Authority, Washington State Department of Health), public health and healthcare professionals. Findings may also be used to develop, test and implement clinical interventions that can prevent or reduce the severity of adverse effects caused by cannabis consumption.

About us.

The Addictions, Drug and Alcohol Institute [Cannabis Education and Research Program](#) is housed at the University of Washington School of Medicine, Psychiatry and Behavioral Health Department.

What can you do if you want more information?

Talk to the study team. We are here to help you understand the study. Please ask us any questions you may have, even about things that are not in this document. You can reach us at cerp@uw.edu. It is our responsibility to give you the information you need to make a decision and to give you time to think about whether or not you want to sign up.

Talk to someone else. If you want to talk about the study with someone who is not part of the study team, talk about your rights as a research subject, or to report problems or complaints about the study, contact the UW Human Subjects Division.

Study Team	Beatriz Carlini, PhD is the lead researcher at the University of Washington for this study and can be contacted at bia@uw.edu . You may also contact the study team at CERP@uw.edu .
