Opioids and Stimulants
Patterns of use & consequences, motivations for use, interest in reducing use and services

Caleb Banta-Green, MSW, MPH, PhD
Principal Research Scientist, ADAI, School of Medicine
Affiliate Associate Professor, School of Public Health, Health Services
Affiliate Faculty, Harborview Injury Prevention & Research Center
June 29, 2021
Objectives

• Trends in heroin, fentanyl, & stimulants in WA State
• Syringe service program clients report of substance use and services desired
• Qualitative information on meth-opioid use
• Brief implications for treatment and harm reduction
Major drugs: Drug–positive crime lab cases (count), statewide

Analysis by UW ADAI. For data sources, see text or adai.uw.edu/WAdata

Source: WA State Patrol Crime Lab. Local law enforcement evidence testing.

The largest % increase in deaths is among those under 25 from 2019-20. In the first half of 2020 the majority had only fentanyl detected.

Data source: WA State Dept of Health- PRELIMINARY DATA
Data Visualization-ADAI
https://adai.uw.edu/wadata/emerging_deaths.htm

>90% are methamphetamine
A majority of meth overdoses only involve meth., followed by meth + opioid and this proportion is consistent over time.
• Hitting the NW later and slower than most of US, but rapid recent increases

• Vast majority of fentanyl is in tablet form, rarely in other drugs (as of now)

• Populations consuming appear to be mostly:
  • Teens/Young adults without OUD
  • Teens/Young adults with rapid onset OUD
  • Adults with pre-existing OUD

Syringe Service Program Client Survey

- SSP staff and volunteers administered the voluntary, face-to-face questionnaire June-July 2019. (previously 2015 and 2017)
- Attempted census (n=1,269)
- Offered candy as thank you.
- ADAI conducted data entry, analyses, and reporting. Electronic data and summary provided to each local organization, which they own.
- Partnership with Public Health-Seattle & King County and WA Dept of Health
  - Alison Newman, MPH
  - Susan Kingston
  - Sara Glick, PhD, MPH
  - Joe Tinsley
  - Sarah Deutsch, MPH
  - SSP’s across the state
Drugs used in different time frames  

- **Methamphetamine**
  - Past 3 months: 84%
  - Past week: 78%
  - 5-7 days past week: 49%

- **Heroin**
  - Past 3 months: 78%
  - Past week: 72%
  - 5-7 days past week: 59%

- **Meth and heroin together**
  - Past 3 months: 46%
  - Past week: 40%
  - 5-7 days past week: 20%

*n=1,269*
Past week stimulant use among main heroin  n=725

81% Used stimulants
19% Did not use stimulants

Past week opioid use among main methamphetamine  n=331

31% Used opioids
69% Did not use opioids
Acute consequences of methamphetamine use in the past 3 months, among those who used any meth (n=1089)
Interest in reducing or stopping opioid use
among main drug heroin, not in treatment, and past week heroin use  n=514

“What types of help would you want if they were easy to get?”
among main drug heroin, past week opioid use, somewhat/very interested in reducing opioid use n=421

Interest in reducing or stopping stimulant use among main drug meth, not in treatment, and past week meth use n=281

“What types of help would you want if they were easy to get?” n=136 among main drug meth, past week meth use, & somewhat/very interested in reducing stimulant use
Participants reported that they used methamphetamine to increase energy, cope with mental health issues, lessen physical pain, and handle symptoms of opioid withdrawal.

“If you do meth and you’re sick from heroin, it usually takes care of the pain.”
Meth is very available.

“They’ve kind of gone hand-in-hand. Everyone that’s doing heroin is doing meth. So, you’ve got your meth and dealing and also to be able to keep up so you can get your next fix and not go to sleep until you’re dope sick.”
Lack of housing and the consequences of drug use were top concerns for interviewees who also identified a range of services that would be helpful to improve their overall quality of life.

“I’d feel like a person. To wake up in a bed, I can’t even tell you the way that it feels, and a door that locked. Yeah, it would definitely help me.”
Why do people use meth- overview

People using methamphetamine report a range of reasons:

- Social/Identity
- Energy to work
- Energy to not be victimized at night when sleeping outside
- Relieves depression
- Feels “great”
- Improves sex
- Prevent pain of opioid withdrawal
- Offset sleepiness due to opioids

Meth has functional benefits
• Many don’t want “treatment”

• Addressing psychosocial motivations for use may need to happen before reducing/ceasing use

• Decreasing chaos is often a helpful engagement point

• Treating OUD with buprenorphine or methadone may eventually lessen methamphetamine use

• Shared decision making with ongoing engagement/ navigation may provide foundation for long term care relationship

• Ongoing drop in access to comprehensive services over an extended period of time is an emerging model of care
Many don’t believe it’s possible to OD or die from meth.

“I just wanted to thank you for sending the flyers on meth overdose. I can’t believe how many of our participants have said that they didn’t know you could die from one [meth od].” SSP staff person
